The IC660HHM502 monitor is a GE Fanuc manufactured handheld monitoring device. It is fully compatible with the GE Series 90-70 PLC system. It can be connected to different I/O modules and devices by using the monitoring port. The monitor helps the operators with the block setup, data monitoring, and operation diagnostics. It can easily interface with compatible Genius I/O block and controller modules. This handheld monitor or HHM comes with a keypad and an LCD display screen. The display unit can easily display 4 lines with 16 characters of text each at a single time. The keypad comes with function keys, decimal keys, and operation keys. A connection for a charger/adapter is also present in the IC660HHM502 monitor. A mode select key switch is present at the top of the monitor that can easily restrict access to specific operators only for specific functions.

By using the GE Fanuc IC660HHM502 handheld monitor, the operators are able to map and monitor the I/O racks, display the current input and output values, display the bus scan time, clear faults, and show additional information from the high-speed counter and TRAC blocks. The monitor is powered with an internal battery or external power source rated at 115/230 Volts AC. For easy access, the IC660HHM502 monitor can be mounted onto panels. The monitor has multilingual support and it can be set up in 4 different languages which are Italian, French, German, and English. The IC660HHM502 monitor can be carried with a rugged case that can be mounted on a workbench. This handheld monitor should be kept away from sources of heat generation and EMC noise.
