Description

The GE Fanuc IC755ACC10PRO spare parts kit is a kit of 10-inch screen protectors that is compatible with the operator interface terminals from the Quickpanel+ series that come with 10-inch screens. This set has been manufactured by GE Fanuc to promote the protection of fragile terminal parts like touchscreens. The compatible operator interface terminals come with a 10-inch TFC LCD screen with a resolution of 800 x 600 SVGA and provide projected capacitive displays. These displays are meant to be controlled with gloved hands or a stylus. It is recommended that the end users be extremely careful when installing the GE Fanuc IC755ACC10PRO 10-inch screen protectors. These screen protectors need to fit the whole screen and air bubbles might prevent them from performing their function properly. This kit comes with a set of 3 different protectors that can all be used for a prolonged period of time.

The installation of the GE Fanuc Quickpanel+ IC755ACC10PRO 10-inch screen protectors is easy, although it is recommended to do it carefully to ensure that the whole area of the screen that is being protected is covered. The GE Fanuc IC755ACC10PRO 10-inch screen protectors help to protect the terminal screens against scratches and other damages caused by constant use and manipulation. Another important function of these screen protectors is that they shield the screen from dust and dirt. Once the screen protector becomes blurry and scratched, it can be replaced with a new one. These screen protectors are manufactured in a special material that helps to prevent the screen surface from having fingerprint smudges all over it.
