GE Series 90-30 Series Service Manual

IC693BEM335

1. Description

The GE Fanuc IC693BEM335 Ethernet Network Interface Module allows the users to exchange data between the GE Fanuc Series 90-30 PLC and a wide variety of different field devices, such as discrete signals coming from switches and sensors and analog signals from transmitters. It comes with 2 serial ports that allow the connection of FIP buses into the network.

2. Specifications

Specification	Value
Brand	**GE Fanuc**
Series	**Series 90-30**
Part	**Number IC693BEM335**
Type	**of component Ethernet Interface**
Number	**of serial ports 2**
Power	**supply 5 VDC**
IP	**Rating IP 20**
Hot-swap	**operations Not supported**
Operating	**frequency 2.5 MHz**
Number	**of Status LEDs 3**
PLC	**compatibility GE Fanuc Series 90-30**

3. Product Information

The GE Fanuc IC693BEM335 Ethernet Network Interface Module allows the users to exchange data between the GE Fanuc Series 90-30 PLC and a wide variety of different field devices, such as discrete signals coming from switches and sensors and analog signals from transmitters. It comes with 2 serial ports that allow the connection of FIP buses into the network.

Technical specifications for IC693BEM335

Brand GE Fanuc

Series Series 90-30

Part Number IC693BEM335

Type of component Ethernet Interface

Number of serial ports 2

Power supply 5 VDC

IP Rating IP 20

Hot-swap operations Not supported

Operating frequency 2.5 MHz

Number of Status LEDs 3

PLC compatibility GE Fanuc Series 90-30
