ATV71HU15N4

1. Description

The ATV71HU15N4 is a variable speed drive from Schneider Electric's Altivar 71 series, designed to manage motor performance with precision. It operates within a voltage input range of 380 to 480 VAC, and supports a frequency supply of 47.5 to 63 Hz, indicating its adaptability for various industrial environments.

Description

The Schneider Electric ATV71HU15N4 variable speed drive is engineered for efficient control in industrial machinery. It functions with a 3-phase input configuration and operates within an impressive input voltage range of 380 to 480 VAC. The frequency supply for this drive accommodates 47.5 to 63 Hz, providing versatility in various applications.

This drive exhibits an input current limit of 5.8A, ensuring that it efficiently manages power. The output configuration allows voltage adjustments from 0 to 480 VAC. The output frequency can be finely tuned within the range of 0.1 to 599 Hz, supporting diverse operational needs. At 460V, the output current peaks at 3.4A, rising to 4.1A when functioning at 380V. This represents a solid capability for motor control.

Additionally, the ATV71HU15N4 handles a maximum transient current of 6.2A for up to 60 seconds, or precisely for 2 seconds, providing robust management during fluctuations. With a power rating of 1.5 kW or 2 HP, this drive can proficiently handle a range of motors.

The design includes a heat sink to aid in temperature regulation, and it comes equipped with an integrated EMC filter, enhancing compliance with noise reduction standards. The motor control profile utilizes vector control without requiring speed feedback, ensuring precise operation without additional complexity.
